BUREAU OF PUBLIC WATER SUPPLY

CALENDAR YEAR 2008 CONSUMER CONFIDENCE REPORT CERTIFICATION FORM

DJ60040
List PWS ID #s for all Water Systems Covered by this CCR

Holmes Interstate Utility O istrict
Public Water Supply Name

confide	deral Safe Drinking Water Act requires each <i>community</i> public water system to develop and distribute a consumer nce report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR mailed to the customers, published in a newspaper of local circulation, or provided to the customers upon request.						
Please .	Answer the Following Questions Regarding the Consumer Confidence Report						
	Customers were informed of availability of CCR by: (Attach copy of publication, water bill or other)						
	Advertisement in local paper On water bills Other						
	Date customers were informed:/						
	CCR was distributed by mail or other direct delivery. Specify other direct delivery methods:						
	Date Mailed/Distributed://						
	CCR was published in local newspaper. (Attach copy of published CCR or proof of publication)						
	Name of Newspaper. Allmes Centy Herald						
	Date Published: $\frac{\partial \mathcal{L}}{\partial l} = \frac{l}{l} \frac{l}{l} \frac{\partial \mathcal{L}}{\partial l}$						
	CCR was posted in public places. (Attach list of locations)						
	Date Posted: / /						
	CCR was posted on a publicly accessible internet site at the address: www						
<u>CERTI</u>	FICATION						
the forn	certify that a consumer confidence report (CCR) has been distributed to the customers of this public water system in and manner identified above. I further certify that the information included in this CCR is true and correct and is not with the water quality monitoring data provided to the public water system officials by the Mississippi Statement of Health, Bureau of Public Water Supply.						
J/0 Name/	Fine (President, Mayor, Owner, etc.)						

Mail Completed Form to: Bureau of Public Water Supply/P.O. Box 1700/Jackson, MS 39215 Phone: 601-576-7518

PROOF OF PUBLICATION

HOLMES COUNTY HERALD

LEXINGTON, MISSISSIPPI

STATE OF MISSISSIPPI, HOLMES COUNTY

Personally appeared before me, the undersigned authority, Chancery Clerk of said County and State,
Bruce Hill, publisher of a public newspaper called the Holmes County Herald established in 1959 and
published continuously since that date in said County and State, who, being duly sworn, deposed and
said that the notice of which a true conv is hereto anneved was published in said naner for

times, as follows, to wit:

2008 Annual Drinking Water Quality Report Holmes Interstate Utility District PWS#: 0260040 May 2009

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protour water resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the Meridian Upper Wilcox Aquifer.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. The general susceptibility rankings assigned to each well of this system are provided immediately below. A report containing detailed information on how the susceptibility determinations were made tras been truinshed to our public water system and is available for viewing upon request. The wells for the Holmes Interstate Utility District have received a moderate susceptibility ranking to contamination.

If you have any questions about this report or concerning your water utility, please contact John Ellington at 862.613.4941. We want our valued outstomers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the first and third Mondays of each month at 9:00 AM at the Holmas County Board Room, Laxington, MS.

meetings. They are held on the first and third Mondays of each month at 9:00 AM at the Holmes County Board Room, Lexington, MS.

We routinely monitor for constituents in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1" to December 31". 2008. In cases where monitoring wearn't required in 2008, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, redioactive materials and can pick up substances or contaminants from the presence of animals or from human activity, microbala confaminants, such as viruses and bacteria, that may come from sewage treatment plants, soptic systems, agricultural investock operations, and widtliff; inorganic contaminants, such as salts and the synthic can be naturally occurring or result from urben storm-water monif, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as griculture, united short-water monif, industrial, or domestic wastewater discharges, oil and gas production, mining, or resulted issues; organic chemicals, which can be considered uses; organic chemicals short-water monif, and residential uses; organic chemicals contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septio systems; radioactive contaminants, which can be naturally occurring to be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of cortain contaminants in water provided by public water systems. All dinking water, including bottied drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's importa

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking valer. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of selety.

Parts per million (ppm) or Milligrams per liter (mpn) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measurs- ment	MCLG	MCL	Likely Source of Contamination	
Inorganic	Contam	inants							
10. Barium	N.	2008	.052	No Range	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits	
14. Copper	N	2008	.01	0	ppm	1.3	AL=1.3	3 Corrosion of household plumble systems; erosion of natural deposits; leaching from wood preservatives	
18. Fluoride	N	2008	.986	No Range	ppm	4	4	Erosion of natural deposits; wate additive which promotes strong teeth; discharge from fertilizer and aluminum factories	
19. Nitrate (as Nitrogen)	N	2008	.09	No Range	ppm .	10	10	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits	

Most recent sample. No sample required for 2008.
 As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal State requirements. We have learned through our monitoring and testing that some constituents have been detected, however EPA has determined that your water IS SAFE at these levels.

THEY OF WAS DITINISHED IN SAID DADET LOT We agree from the top to the constituents on a monthly basis. Results of regular monitoring are an indigator of whether or not our drinking water meets health standards. Beginning January 1, 2004, the Mississippi State Department of Meetin (MSDH) required public water systems that use chlorine as a primary disinfectant to monitoritest for choine residuals as required by the Stage 1 Disinfection By-Products Rule. We did complete the monitoring requirements for bacteriological sampling that showed no coliform present. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present/elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our Water Association is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When sour/water has been atting for several hours, you can minimize the potential for lead exposure by flushing our tap for 30 seconds to 2 digitals before using water for drinking or cooking. If you are concerned about lead in your water, you may wis not have your water tested. Information on lead in drinking water, testing methods, and sleeps you can take to minimize exposint as available from the Safe Drinking Water Hotline or at http://www.epa.gow/safewaterfieed. The Mississippi State Department of Health Public Health Laboratory offers lead testing for \$10 per sample. Please contact \$01.576.758.2 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hottine at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoping chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infanis can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of intection by cryptosportidum and other microbiological conteminants are available from the Safe Dinking Water Hotilor 1-800-426-4791.

****A MESSAGE FROM MSDH CONCERNING RADIOLOGICAL SAMPLING****

In accordance with the Radionuclides Rule, all community public water supplies were required to sample quarterly for radionuclides beginning January 2007 - December 2007. Your public water supply completed sampling by the scheduled deadline, however, during a sudf, of the Mississippl State Department of Health Radiological Health Laboratory, the Environmental Protection Agency (EPA) (Supersided analyses and reporting of radiological ecompliance samples and results until further notice.

Although this was not the result of inaction by the public water supply, MSDH was required to issue a violation. The Bureau of Public Water Supply is taking action to resolve this issue as quickty as possible. If you have any questions, please contact Melissa Parker, Deputy Director, Bureau of Public Water Supply, at 801.578.7518.

The Holmes Interestate Utility District works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.
